## Introduction

The tradition of producing excellent quality products to meet the market demands lead SKM to design and manufacture a low sound product line of APCL Air Cooled Chillers for commercial air conditioning market to deliver the best value and reliability for buildings such as shopping centers, warehouses, and free standing retail outlets. APCL Series Chillers are designed and manufactured to meet the requirements of the severe climatic condition of the Gulf.

The compressors with the award winning scroll technology provides the product line with superior quietness, efficiency, reliability and durability.

APCL, the new generation of SKM Chillers, units are assembled, leak tested, evacuated, internally wired and fully charged with Refrigerant R-22. Every unit is fully tested before delivery and is ready for installation.

APCL Series Scroll Chillers are designed and manufactured in accordance with SKM Quality Management System, approved to ISO-9001:2000 & 14001:2004 and rated in accordance with AHRI-550/590.

APCL Series Package Air Cooled Scroll Chillers are available in 32 models covering nominal capacity ranges from 5 TR - 74 TR (18 kW to 260 kW) in 50Hz and 6 TR - 87 TR (21 kW to 306 kW) in 60Hz.

SKM Airconditioning Equipment,

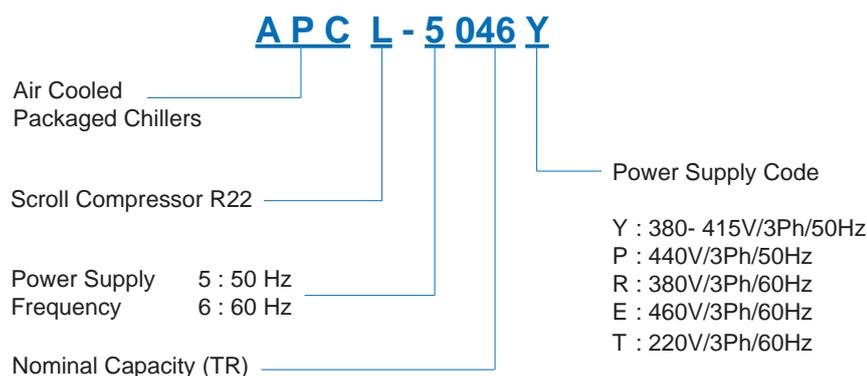

**Built in the Gulf...for the World**

## Legend

The following legends are used throughout this manual:

|                                   |                                    |
|-----------------------------------|------------------------------------|
| cfm..... Cubic feet per minute    | ft.wg..... feet of water gauge     |
| EER ..... Energy Efficiency Ratio | Ph ..... Phase                     |
| Hz ..... Hertz                    | Pi ..... Power Input of Compressor |
| kW ..... Kilowatts                | TR..... Tons of Refrigeration      |
| kg..... Kilogram                  | WPD .... Water Pressure Drop       |
| lbs..... Pounds                   | WFR .... Water Flow Rate           |
| l/s..... Liters per second        | V ..... Volts                      |

## Nomenclature

# SKM Air Cooled Packaged Chillers

## APCL Series - R22

### General Features

To meet the challenges of today's residential and commercial air conditioning, SKM developed APCL Series that are more compact, lighter in weight, with lesser sound and vibration, to minimize space requirement and structural load on buildings.

APCL Chillers are comprised of models with single compressor for small capacity units and multiple compressors system for higher capacity units. These multiple compressors system offer efficient capacity control, fewer start/stop than larger compressor, reduced starting load and part load capacity if one compressor fails.

APCL Chillers are designed as standard to operate at a wide range of ambient temperature from 50°F (10°C), or lower, if optional low ambient operation kit is included, to 125°F (52°C).

### Main Component Features

#### Compressors

APCL Series Chillers use high efficiency, hermetically sealed scroll compressors that have fewer moving parts compared to equivalent size of reciprocating which results to unmatched reliability and quiet operation. Scroll compressors of APCL Series have superior liquid and debris handling, ability of self-compensating for wear and generate very low gas pulsation.

An external check valve in the discharge line is a standard feature, to prevent the frequent recycling due to leak-back.

APCL compressors include the following features:

- Discharge Temperature Protection.
- Motor Protection.
- Disc check valve.
- Crankcase heater.
- Suction gas cooled.

#### Condensers

Condenser coils are manufactured from seamless copper tubes mechanically bonded to aluminium fins to ensure optimum heat transfer. All coils are tested against leakage by air pressure of 450 psig (3100 kPa) under water. All standard coils are 3 or 4 rows, 12 or 14 FPI (2.1 mm or 1.8mm) fin spacing, 3/8" (9.5mm) O.D. tubes. An integral subcooling circuit is provided to increase the chiller cooling capacity, without additional operating costs.

For different application requirements, other optional condenser fin materials are available:

- Copper fins
  - Copper fins only electro-tinned
  - Copper finned coil electro-tinned after manufacturing
  - Precoated Aluminum fins
- The pre-coated is hydrophobic polyurethane resin.

This option provides substantial corrosion protection beyond standard coil construction.

- Aeris Guard Coil Coating
- The Aeris Guard Coil coat is a self etching high performance modified epoxy finish that is specifically designed to coat and protect Aluminum and Copper surfaces. In addition, the coating is ideal for the protection of ferrous and non ferrous materials.

#### Condenser Fans & Motors

The condenser fans are propeller type, aluminium alloy blades, directly driven by electric motors. Motors are Totally Enclosed Air Over (TEAO) six pole with class 'F' insulation and IP55 protection. The TEAO and class 'F' insulation features ensure long life and are unique to SKM. The motors are factory wired to chiller unit control panel where the motor starters are located to control the operation of these motors.

The condenser fans are individually statically and dynamically balanced at the factory. Complete fan assembly is provided with suitable acrylic coated fan guard.

#### Evaporator

APCL evaporators are Braze Plate Heat Exchangers (BPHE). Channel plates, refrigerant and water connections are constructed from stainless steel with pure copper as brazing material. BPHE design and assembly process are in compliance with Europe, Pressure Equipment Directive (PED 97/23/EC). Maximum working pressure of water side is 363 psig (2500 kPa) and refrigerant side is 392 psig (2700 kPa).

All evaporators are insulated with 1" (25mm) thick flexible closed cell insulation, having K factor of 0.28 Btu.in/ft<sup>2</sup>.hr.°F (0.040 W/m.°K).

#### Casing/Structure Frame

The unit casing in APCL series chillers are made of zinc coated galvanized steel sheets conforming to JIS-G 3302 and ASTM A653 which is phosphatized and baked after an electrostatic powder coat of approximately 60 microns. This finish and coating can pass a 1000 hour in 5% salt spray testing at 95°F (35°C) and 95% RH as per ASTM B117. Unit casing is provided with access doors for easy servicing/maintenance and lifting holes for rigging.

# SKM Air Cooled Packaged Chillers

## APCL Series - R22

### Refrigerant Piping

The refrigeration circuit piping is fabricated from ACR grade copper piping. Each refrigeration circuit includes filter drier, liquid line solenoid valve, thermostatic expansion valve, sight glass and shut off valve. The refrigeration circuit suction line is insulated with ½" (13mm) wall thickness closed cell pipe insulation.

### Control Panel

The unit mounted chiller control panel enclosure is fabricated out of heavy gauge sheet steel in phosphatized powder coated baked finish. The enclosure conforms to IP54 as per guidelines in IEC 529. A hinged access door and key-fastener is provided for easy access and security. The panel is factory wired in accordance with NEC 430 & 440, labelled, tagged and features 220V / 240V controls.

- All compressors are with DOL starting.
- Individual compressor and condenser fan motor contactors.
- Circuit breakers for compressors and condenser fan motors.
- MCB for Control Circuit.
- Remote/Local Selector Switch.
- Microprocessor control boards.
- Control Relays.
- Power and control terminal blocks.

### SKM Microprocessor Controller

All APCL Series Chillers are equipped with a full function microprocessor based controller as a standard feature. The controller is factory programmed for the control of compressors and condenser fans. The controller comes with a built in keypad and display for simple but meaningful man machine interface. This controller provides complete operational control for the chiller and has built-in auto diagnostic capability that can signal normal operation or alarm conditions as well as shutting down the chiller or system if necessary.

#### The Main Features of the controller are as follows:

- Built in LCD display with back light.
- Roll & push knob and 3 function buttons.
- Battery backed up built in real time clock.
- Multiple authorization level to provide tight security for the control system.

- Run hours for the compressors.
- Automatic Lead/Lag of the compressors.
- Capacity control based on leaving water temperature.
- Alarm history.
- Remote Start/Stop facility from an external control system.
- Common fault, run and auto mode indication through volt free contact.

### Display Information

SKM APCL Chillers offer LCD display which allows the operator to access different parameters of the chiller. Operator can view and change the chiller parameters. The display information includes:

- Status
- Outputs
- Inputs
- Alarms
- Set points
- Password

### System Control Philosophy

The unit may be enabled or disabled manually or through the use of an external signal from a building automation system.

Control is based upon Leaving chilled water temperature. Compressors will be staged based on the set point and actual leaving water temperature. On an increase in leaving water temperature, cooling stages will be added and on a decrease in leaving water temperature, cooling stages will be removed from the system. Water flow should be maintained as sensed by the water flow switch, for the chiller to operate.

### System Protection

The intelligent microprocessor based controller monitors all the safeties related to the chiller and makes the necessary protections, by shutting down the entire chiller or the effected circuit. The protection includes:

- Low suction pressure.
- High discharge pressure.
- High compressor motor temperature.
- Freeze.
- Chilled water flow loss.
- Sensor faults.
- Compressor short cycling.

### BMS Connectivity (Optional)

APCL microprocessor can support the major BMS protocols such as BACnet, Modbus & LON. Extra hardware may be required depending on the protocol. The details of the parameters to be controlled, number of chillers in the building, exact protocol, etc. are required before the order as costing of the BMS interface depends on these parameters.

# SKM Air Cooled Packaged Chillers

## APCL Series - R22

### Factory Installed Options

#### Low Ambient Operation Kit (LAO)

For operation down to 25°F (-4°C) ambient. Specify minimum design ambient temperature on order.

#### Alternative Condenser Material

Made of copper tubes and alternative fin material and/or protective coats.

- For Copper Fins, specify (FC).
- For Copper Fins only electrotinned, specify (CFT).
- For Copper Finned Coils with electrotinned after manufacturing, specify (FCT).
- For Pre Coated aluminum fins, specify (FAP).
- For Aluminum Fins with Aeris Coat Protection, specify (FAA).
- For Copper Fins with Aeris Coat Protection, specify (FCA).

#### Galvanized Frame (GFB)

Hot dip galvanized after manufacture, steel frame and base.

#### IP55 Control Panel Enclosure (ICP)

Control Panel for special applications to meet IP55 requirements.

#### Condenser Coil Guard (CGP)

Coil wire mesh guard, in galvanized and painted finish for condensers. Recommended on ground level installations where coil needs to be protected against vandalism.

#### Electronic Expansion Valve (EEV)

To provide energy saving benefits over mechanical thermostatic expansion valve (TXV).

#### Control Transformer (CXT)

This option is necessary and available for APCL models rated for 440V/3PH/50Hz or 460V/3PH/60Hz or power supplies without neutral. When ordering for these voltages, this option must be ordered.

#### Main Isolator (without door interlock) (ISO)

For main power isolation. (consult SKM)

#### Voltage Monitoring Module (VMM)

To prevent APCL unit operation in the event of Phase loss Phase reversal, and Under / Over voltage on the incoming line voltage.

#### Voltage Monitoring Module as per DEWA (DVM)

Under voltage relay as per DEWA regulations. This option is available for Dubai, UAE only.

#### Evaporator Freeze Up Protection (EFP)

Heating cable with thermostat to prevent evaporator freeze-up where low ambient temperatures below 32°F (0°C) are anticipated with/out chiller operation.

#### Ammeter & Phase Selector Switch (AMPC)

To indicate running AMPS of each compressor.

#### Ammeter & Phase Selector switch (AMPI)

To indicate running AMPS on main incomer of a chiller.

#### Voltmeter & Selector Switch (VSS)

For incoming line voltage.

#### Soft Starter (SSS)

To reduce the starting current of compressors using reduced voltage starting method. Compressors will be started using electronic solid state soft starters that will ramp up the speed of the compressors to rated speed within few seconds thus reducing the mechanical & electrical stresses .

#### Suction Pressure read out Capability (SPC)

Additional transducer in suction line to display suction pressure in microprocessor.

#### Pressure Gauges (SDG)

Suction and discharge indication of each refrigerant circuit.

#### Marine Paint (MP)

To provide increased corrosion resistant in coastal environments and off-shore locations.

#### Hydronic Kit (HK)

Refer to hydronic catalogue Bulletin No. 081/2010 for selection.

### Options for Field Installation

#### Chilled Water Flow Switch (CWFS)

#### Anti-vibration mounts, spring type (CAVM)

#### Strainer (STNR)

Table 1

### Note :

- Capacity ratings are based on standard AHRI - 550 / 590 conditions of 95°F (35°C) ambient, 44°F (6.7°C) leaving chilled water temperature, 10°F (5.5°C) range and 0.0001 ft<sup>2</sup>.h°F/Btu (0.018 m<sup>2</sup>.°C/kW) fouling factor.
- Capacity ratings are based on 115°F (46°C) ambient, 45°F (7.2°C) leaving chilled water temperature, 10°F (5.5°C) range and 0.0001 ft<sup>2</sup>.h°F/Btu (0.018 m<sup>2</sup>.°C/kW) fouling factor.

### Note :

Table 2

- Capacity ratings are based on standard AHRI - 550 / 590 conditions of 95°F (35°C) ambient, 44°F (6.7°C) leaving chilled water temperature, 10°F (5.5°C) range and 0.0001 ft<sup>2</sup>.h°F/Btu (0.018 m<sup>2</sup>.°C/kW) fouling factor.
- Capacity ratings are based on 115°F (46°C) ambient, 45°F (7.2°C) leaving chilled water temperature, 10°F (5.5°C) range and 0.0001 ft<sup>2</sup>.h°F/Btu (0.018 m<sup>2</sup>.°C/kW) fouling factor.

# SKM Air Cooled Packaged Chillers

## APCL Series - R22

### CAPACITY RATINGS - 50 Hz

|                  | 45    | 88.5                                       | 97.1     | 212.5        | 14.2        | 83.7           | 107.8    | 201          | 12.8        | 78.8           | 119.4    | 189          | 11.4        | 76.2           | 125.5    | 182.9        | 10.7        | 73.6           | 131.8    |              |             |

# SKM Air Cooled Packaged Chillers APCL Series - R22

## Capacity Correction & Limits

### Evaporator Chiller Limits of Operation

Maximum LCWT : 48°F (8.9°C)  
 Maximum ECWT : 76°F (24.4°C)\*  
 Minimum LCWT : 42°F (5.6°C)  
 For Lower LCWT ethylene glycol solution to be used consult SKM.  
 (\*For short periods.)

### Range & Flow Limits

Range limit 8°F - 16°F (4.4°C - 8.9°C) except where limited by water flow rate limits for evaporator. For minimum & maximum water flow rate refer to page 13.

### Working & Test Pressures

| Evaporator Pressure      | Refrigerant | Water |      |
|--------------------------|-------------|-------|------|
| Maximum Working Pressure | psig        | 392   | 363  |
|                          | kPa         | 2700  | 2500 |
| Test Pressure            | psig        | 725   | 725  |
|                          | kPa         | 5000  | 5000 |

Table 5

| Condenser Pressure       | Refrigerant |      |
|--------------------------|-------------|------|
| Maximum Working Pressure | psig        | 300  |
|                          | kPa         | 2068 |
| Test Pressure            | psig        | 450  |
|                          | kPa         | 3102 |

Table 6

### Cooler Fouling Factors

The units are rated at 0.0001 ft<sup>2</sup>.h.°F/Btu (0.018m<sup>2</sup>.°C/KW) Other than this fouling factor, apply the correction factors to get the effect on cooling capacity and power input.

| Fouling Factor |       | Capacity Multiplier | Power Multiplier |
|----------------|-------|---------------------|------------------|
| IP             | SI    |                     |                  |
| 0.0001 *       | 0.018 | 1                   | 1                |
| 0.00025        | 0.044 | 0.99                | 1                |
| 0.0005         | 0.088 | 0.98                | 0.99             |
| 0.001          | 0.176 | 0.95                | 0.98             |
| 0.002          | 0.352 | 0.90                | 0.96             |

\*Standard fouling factor, as per AHRI standard 550/590. Table 7

### Fin Material Correction Factors

The unit ratings are based on copper tube and aluminium fins condenser. For alternative condenser material the following factors apply: (**Note: Aeris Coating does not affect Capacity and Power**).

| Condenser Fin Material | Capacity Multiplier | Power Multiplier |
|------------------------|---------------------|------------------|
| Precoated Aluminum     | 0.995               | 1.001            |
| Copper                 | 1.01                | 0.992            |

Table 8

### Altitude Correction Factor

The units ratings are based on sea level. Above sea level apply the following correction factors:

| Altitude |        | Capacity Multiplier | Power Multiplier |
|----------|--------|---------------------|------------------|
| Feet     | Meters |                     |                  |
| 0        | 0      | 1                   | 1                |
| 2000     | 610    | 0.99                | 1.01             |
| 4000     | 1219   | 0.98                | 1.02             |
| 6000     | 1829   | 0.97                | 1.03             |
| 8000     | 2438   | 0.96                | 1.04             |
| 10000    | 3048   | 0.95                | 1.05             |

Table 9

### Range Correction Factors

Capacity ratings based on 10°F (5.5°C) chilled water range. For other than this range please use correction factor below.

| Range |     | Capacity Multiplier | Power Multiplier |
|-------|-----|---------------------|------------------|
| °F    | °C  |                     |                  |
| 8     | 4.4 | 0.995               | 0.998            |
| 10    | 5.5 | 1                   | 1                |
| 12    | 6.7 | 1.005               | 1.002            |
| 14    | 7.8 | 1.01                | 1.004            |
| 16    | 8.9 | 1.015               | 1.006            |

Table 10

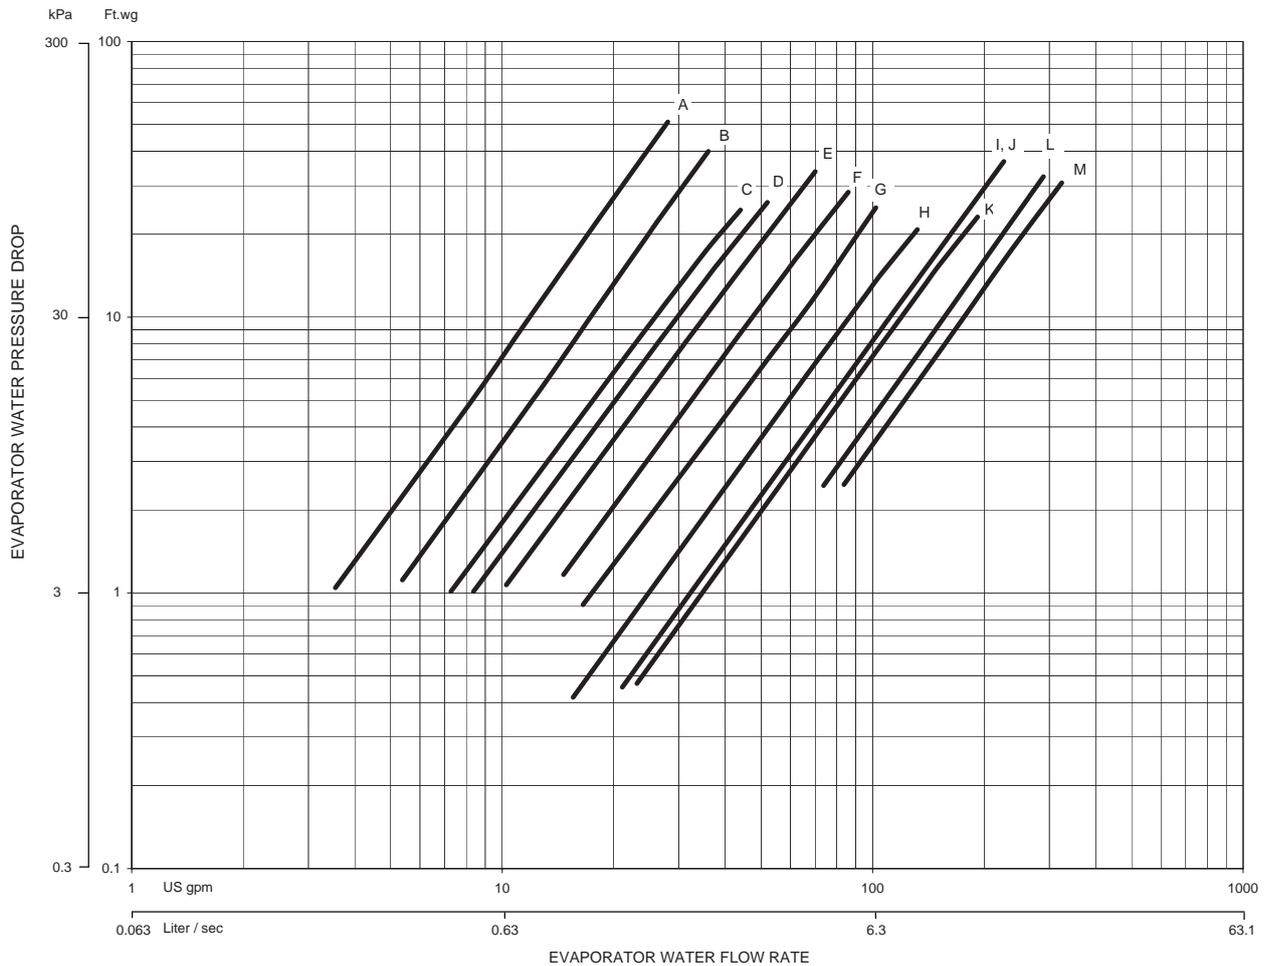

## Capacity Control Steps

| Models |      | Capacity Step          |
|--------|------|------------------------|
| 5005   | 6006 | 100 - 0                |
| 5008   | 6010 | 100 - 0                |
| 5010   | 6012 | 100 - 0                |
| 5012   | 6014 | 100 - 0                |
| 5016   | 6020 | 100 - 50 - 0           |
| 5020   | 6024 | 100 - 50 - 0           |
| 5024   | 6028 | 100 - 50 - 0           |
| 5030   | 6035 | 100 - 50 - 0           |
| 5035   | 6040 | 100 - 56 - 0           |
| 5038   | 6045 | 100 - 50 - 0           |
| 5042   | 6050 | 100 - 77 - 54 - 27 - 0 |
| 5046   | 6055 | 100 - 75 - 50 - 25 - 0 |
| 5055   | 6065 | 100 - 78 - 56 - 28 - 0 |
| 5060   | 6075 | 100 - 75 - 50 - 25 - 0 |
| 5070   | 6080 | 100 - 78 - 56 - 28 - 0 |
| 5075   | 6090 | 100 - 75 - 50 - 25 - 0 |

# SKM Air Cooled Packaged Chillers APCL Series - R22

## Selection Procedure

**APCL** Chillers should be selected with specific Design Considerations, requirements and parameters of the intended application. Care and good engineering should lead to an efficient and cost effective selection. Sample procedures are shown below:

### Example 1: (IP System)

Select an Air Cooled Package Chiller giving a capacity of 30 TR to cool water from 56°F to 44°F at 2000 ft. altitude, 0.00075 fouling factor, power supply 415V/3Ph/50Hz and 115 °F ambient Temperature.

Find compressor power input in **kW**.

#### Selection:

Apply the following factors to convert the required capacity to tabulated capacity ratings.

|                | Capacity Multiplier | Power Multiplier |
|----------------|---------------------|------------------|
| Range (12 °F)  | 1.005               | 1.002            |
| Altitude       | 0.99                | 1.01             |
| Fouling Factor | 0.965               | 0.985            |

$$\begin{aligned} \text{Tabulated rated capacity} &= \frac{30}{1.005 \times 0.99 \times 0.965} \\ &= 31.2 \text{ TR} \end{aligned}$$

Refer to capacity rating 50Hz under 115 °F condenser entering air temperature and select a chiller giving a capacity nearest larger to 31.2 TR at 44 °F LCWT. Select model APCL 5038 giving a capacity of 33.7 TR and PI = 47.1 **kW**.

Apply correction factors to the selected unit to find actual capacity and P I.

$$\begin{aligned} \text{Capacity} &= 33.7 \times 1.005 \times 0.99 \times 0.965 \\ &= 32.4 \text{ TR} \\ \text{P I} &= 47.1 \times 1.002 \times 1.01 \times 0.985 \\ &= 47.0 \text{ kW} \end{aligned}$$

#### Calculation of Water Flow Rate (WFR)

To calculate the water flow rate to be circulated, use the following:

$$\begin{aligned} \text{WFR (US gpm)} &= \frac{\text{C.CAP (TR)} \times 24}{\text{Range (°F)}} \\ &= \frac{32.4 \times 24}{12} = 64.8 \text{ US gpm} \end{aligned}$$

Determine the pressure drop from chart on Page 13, using 64.8 gpm, pressure drop reading is 3.6 ft wg.

### Example 2: (SI System)

Select an Air Cooled Package Chiller giving a capacity of 100 **kW** of refrigeration to cool water from 14.5°C to 6.7°C at 610M altitude, 0.132 fouling factor, power supply 380V/3Ph/60Hz and 40.6 °C ambient Temperature.

Find compressor power input in **kW**.

#### Selection:

Apply the following factors to convert the required capacity to tabulated capacity ratings.

|                | Capacity Multiplier | Power Multiplier |
|----------------|---------------------|------------------|
| Range (7.8 °C) | 1.010               | 1.004            |
| Altitude       | 0.99                | 1.01             |
| Fouling Factor | 0.965               | 0.985            |

$$\begin{aligned} \text{Tabulated rated capacity} &= \frac{100}{1.01 \times 0.99 \times 0.965} \\ &= 103.6 \text{ kW} \end{aligned}$$

Refer to capacity rating 60Hz under 40.6 °C condenser entering air temperature and select a chiller giving a capacity nearest larger to 103.6 at 6.7 °C LCWT. Select model APCL 6035 giving a capacity of 122.2 **kW** and PI = 43.2 **kW**.

Apply correction factors to the selected unit to find actual capacity and P I.

$$\begin{aligned} \text{Capacity} &= 122.2 \times 1.01 \times 0.99 \times 0.965 \\ &= 117.9 \text{ kW} \\ \text{P I} &= 43.2 \times 1.004 \times 1.01 \times 0.985 \\ &= 43.1 \text{ kW} \end{aligned}$$

#### Calculation of Water Flow Rate (WFR)

To calculate the water flow rate to be circulated, use the following:

$$\begin{aligned} \text{WFR (L/s)} &= \frac{\text{C.CAP (kW)} \times 0.239}{\text{Range (°C)}} \\ &= \frac{117.9 \times 0.239}{7.8} = 3.6 \text{ l/s.} \end{aligned}$$

Determine the pressure drop from chart on Page 13, using 3.6 l/s, pressure drop reading is 9.1 **kPa**.

**For more details refer to other specifications and dimensional drawings for the selected model.**

Table 17

### Legend

- MFA** Maximum Fuse Amps (for fuse sizing), complies with NEC Article 440-22 & 430-52.
- MCA** Minimum Circuit Amps.(for wire sizing), complies with NEC article 440-33.
- ICF** Maximum Instantaneous Current Flow

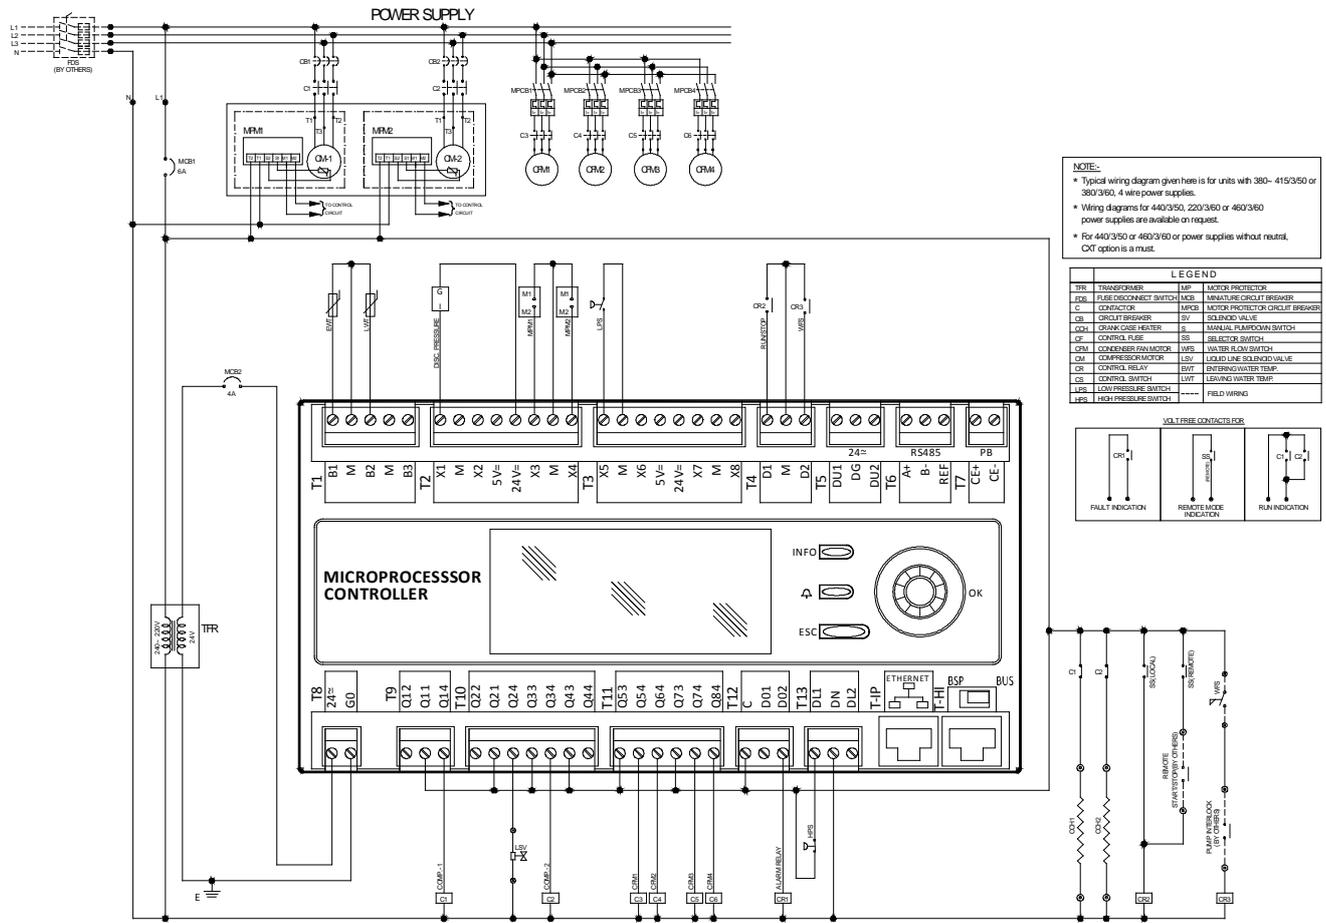

- RLA** Rated Load Amps. (at worst operating condition)
- LRA** Locked Rotor Amps
- FLA** Full Load Amps

### Note :

Voltage imbalance not to exceed  $\pm 2\%$  of the rated voltage

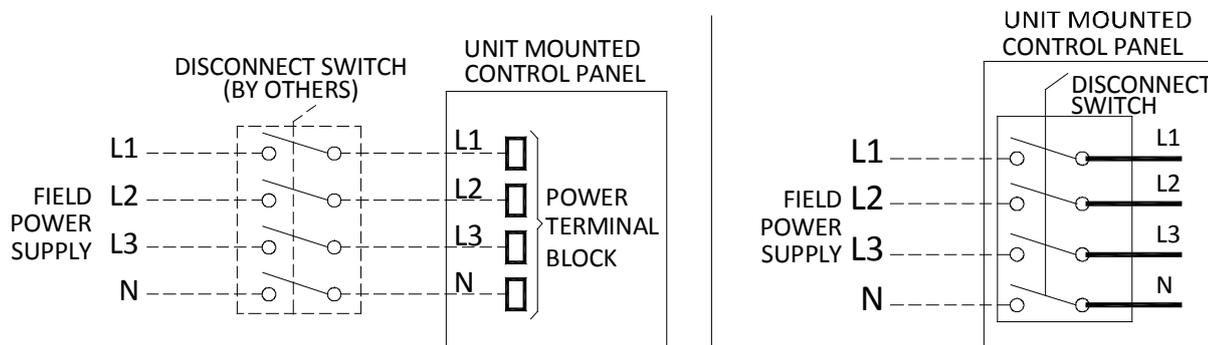

# SKM Air Cooled Packaged Chillers APCL Series - R22

## Typical Wiring Diagram

## Power Entry Connections

All APCL units are with single point power entry.

Standard Power Connection

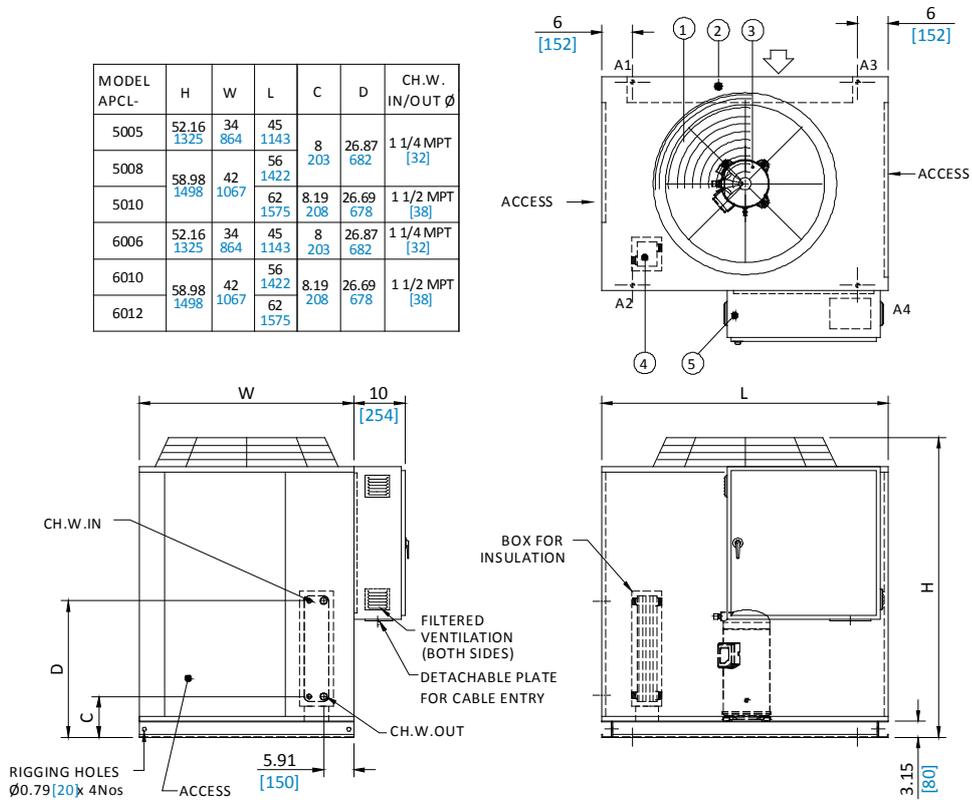

Power Connection with Optional Isolator

# SKM Air Cooled Packaged Chillers APCL Series - R22

## Installation & Application Data

### Location/Space Requirements

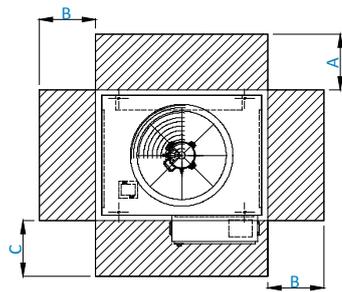

Due to the vertical air flow discharge condenser design, it is recommended that certain precautions are to be taken before installation. There should be no obstruction on the air flow.

Orient the unit so that prevailing winds blow parallel to the unit length thus minimizing the effects on condensing pressure. If it is not practical to orient the unit in this manner, a wind deflecting shield should be considered.

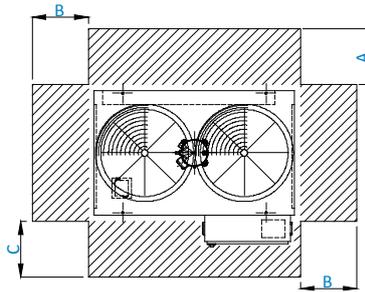

It is also necessary to provide adequate clearance on all sides of the unit for service access and satisfactory performance. This will prevent excessive condensing temperatures and enhance system performance and operating economy.

Refer to Figure A for recommended clearance around chillers to avoid warm air recirculation or coil starvation.

APCL 5035 ~ 5075  
APCL 6040 ~ 6090

Figure A

### Foundation

A flat concrete foundation or floor which can support the weight of the equipment must be provided as the unit must be level for proper operation and functioning of controls.

### Vibration Isolation

Under certain critical conditions it is recommended that vibration isolators of rubber-in-shear or spring type be installed under the base.

The isolators must be designed for the operating weight of the unit. For operating load points refer to the load distribution table. Correct selection of types of isolators depends upon application and structure.

To further reduce the transmission of vibration, it is recommended that flexible water connections suitable for the system pressure be installed on the water inlet and outlet connections of the chiller. For critical applications or locations, services of a noise and vibration expert is recommended.

## Water Piping Practices

SKM suggests abiding by the local authorities' chilled water piping recommendations and practices as they can provide the installer the building and safety codes required for the installation.

Water piping should be designed to have a minimum number of bends and horizontal piping levels. Below are the following components it should have.

1. Temperature and pressure gauges in entering and leaving chiller water piping for unit servicing and commissioning. Pressure gauges must be installed on the same level.
2. Vibration eliminators in entering and leaving chilled water piping to lessen the sound and vibration transmitted to the building.
3. Pipe strainer in the evaporator entering piping to protect the BPHE from particles blocking the channels causing low performance, increased pressure drop and risk of freezing. If the media contain particles larger than 1 mm, a strainer with a size of 16-20 mesh (number of openings per inch) should be installed before the heat exchanger.
4. Water flow switch in the leaving chilled water piping, wired to the terminals provided in the control panel, to make sure that it has sufficient flow of water in the evaporator. This will prevent the evaporator from freezing up when the water flow is interrupted and avoid compressor slugging on start-up

5. To isolate the unit from the piping system when servicing or during maintenance, install a shut off valve on the entering and leaving chilled water piping.
6. Expansion Tank provides additional space in the chilled water piping system as temperature rises and furthermore, it maintains a positive pressure within the working limitations of the system.
7. Air Vents at high points in the chilled water system to bleed air from the system.
8. Vapor barrier on the outside of the insulation to avoid condensation in the cold surface of the pipe that may cause damage on the building structure. A thorough leak test should be made before insulating the pipe.

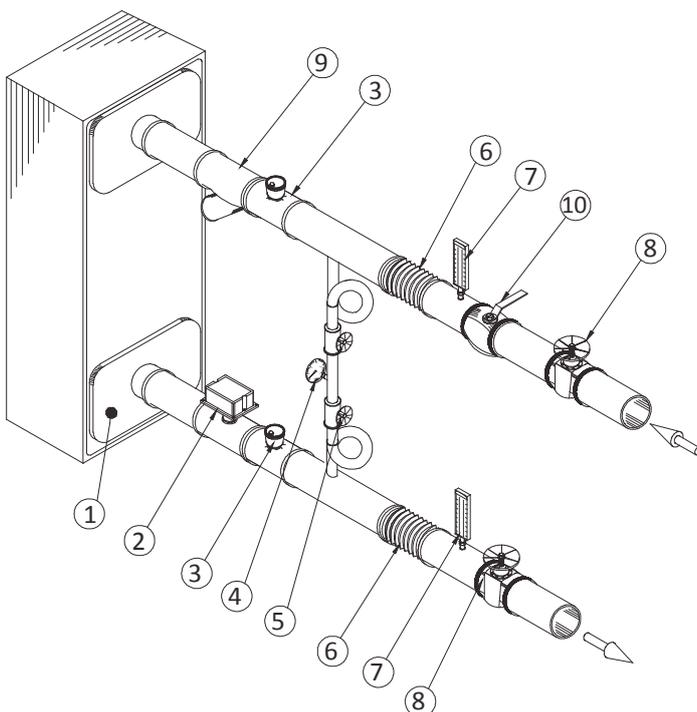

Flush all chilled water piping before making the final connection to the unit. SKM recommends hiring services of water treatment specialist to determine the type of necessary treatment. Improper or untreated chilled water leads to scaling, erosion, corrosion or algae that can cause inefficient operation and BPHE damage. SKM will not be liable for damages caused by improper or untreated chilled water.

## Unit Sizing

It is strongly recommended to size the chiller for the present load. For future expansion, it is recommended to install another chiller to meet the additional load demand.

Over sizing of chillers by more than 10% at design conditions must be avoided. Over sizing causes energy inefficiency (more power consumption), erratic system operation and shortened compressor life due to excessive cycling of compressors.

## TYPICAL PIPING FOR BPHE EVAPORATOR

1. HEAT EXCHANGER
2. WATER FLOW SWITCH
3. VENT
4. PRESSURE GAGE
5. SHUT OFF VALVES
6. VIBRATION ELIMINATOR
7. THERMOMETERS
8. GATE VALVE
9. STRAINER
10. BALANCING VALVE

## GUIDE SPECIFICATIONS

### GENERAL

Unit shall be microprocessor controlled, shall have at least one refrigerant circuit consist of a hermetic scroll compressor(s), air cooled condenser, evaporator, interconnecting refrigerant piping, safety devices and accessories.

Unit shall be factory assembled, leak tested, evacuated and completely charged with refrigerant R - 22. All factory wiring and piping shall be contained within the machine enclosure.

All electrical components shall be protected from the weather. Unit shall be rated in accordance with AHRI - 550/590. Each machine shall be capable of operating satisfactorily in a wide range of ambient air temperatures ranging from 50°F (10°C) to 125°F (52°C).

Unless indicated otherwise on electrical wiring diagram, each unit shall be factory equipped to connect to only one electrical power feeder with the necessary circuit breakers, if so specified. Unit shall be mounted on anti vibration isolators flexible enough to dampen any vibrations.

Unit shall be manufactured in ISO - 9001:2000 and 14001:2004 accredited facility.

### COMPRESSOR

Compressor shall be hermetically sealed, compact high efficiency and low noise scroll type. These compressors are refrigerant gas cooled, furnished with advanced scroll temperature protection or internal motor protection.

### EVAPORATOR

Evaporators shall be with Brazed Plate Heat Exchanger (BPHE). Brazed plate heat exchanger's channel plates, refrigerant and water connections shall be constructed from stainless steel with pure copper as brazing material. The design and assembly process shall comply with Europe Pressure Equipment Directive PED 97/23/EC and maximum working pressure of water side shall be 363 psig (2500 kPa) and refrigerant side shall be 392 psig (2700 kPa). Evaporator shall be 1 or 2 independent refrigerant circuits.

The evaporator shall be insulated with 1" (25mm) thick flexible closed cell insulation with a maximum K factor of 0.28 Btu.in/ft<sup>2</sup>.hr.°F (0.040 W/m.°K)

### CONDENSER COIL

Condenser coil shall be air cooled and shall be constructed of seamless copper tubes, maximum 4 rows deep, 3/8" (9.52 mm) O.D. and mechanically bonded to the wavy type aluminum fins. Fins spacing shall be maximum 12/14 FPI (2.1mm/1.8mm). Slit fins shall not be accepted.

Precoated fins shall be used for saline and corrosive environment (if so specified). Integral sub cooling circuit in each coil shall be provided to increase the chiller cooling capacity, without additional operating cost. The coils shall be tested against leakage by air pressure of 450 psig (3100 kPa) under water.

### CONDENSER FANS & MOTORS

The machine shall be furnished with direct driven propeller type discharging air upward condenser fans. Fans shall be constructed of corrosion resistant blades such as heavy gauge aluminum. The fan and drive shall be held in proper alignment. Fan assemblies shall be provided with heavy gauge, rust resistant steel. The fan assembly shall be protected with an acrylic coated steel wire fan guard. All condenser fans shall be individually statically and dynamically balanced for vibration free operation.

Condenser fan motor shall be Totally Enclosed Air Over (TEAO), 3-phase type, 6 poles with Class F insulation, Class B temperature rise and IP55 protection. Also, Motor shall be with permanently lubricated bearings and inherent corrosion resistance shaft. Condenser fan motors shall be provided with individual 3 pole contactor rated for AC3 duty operation & motor protector circuit breaker for short circuit, over current protection & isolation.

### REFRIGERATION CIRCUITS

Refrigeration circuits piping shall be fabricated from ACR grade copper pipes and each refrigeration circuit shall include a removable core filter drier, liquid line solenoid valve, thermostatic expansion valve, shut off valve and sight glass.

Suction line shall be insulated with ½" (13mm) wall thickness closed cell pipe insulation with maximum k factor 0.26 Btu.in/ft<sup>2</sup>.hr.°F (0.038 W/m.°K).

### CASING

Machine casing shall be made of heavy gauge zinc coated galvanized steel sheets conforming to JIS-G 3302 and ASTM-A 635. To provide an extremely tough, scratch resistance, excellent anti-corrosive protection, fabricated steel shall be thoroughly de-greased and then phosphatized before application of an average 60 micron backed electrostatic polyester dry powder coating in RAL 7032 color scheme. This finish shall pass 1000-hour, 5% salt spray test at 95°F (35°C) and 95% relative humidity (ASTM B 117).

Machine casing shall be provided with access doors for easy service and maintenance and painted steel wire guard for compressors section.

The machine shall be fully assembled on welded rigid structural steel skid painted with one coat primer and minimum one coat of rust-preventing black enamel.

# SKM Air Cooled Packaged Chillers

## APCL Series - R22

### CONTROL PANEL & CONTROLS

The unit mounted chiller control panel enclosure shall be fabricated out of heavy gauge sheet steel in phosphatized, powder coated baked finish and shall conform to IP-54 protection as per guide lines in IEC-529. Control Panels shall be with hinged doors and key fasteners shall be provided for easy access and security. Panels shall be factory wired in accordance with NEC-430&440, labeled, tagged and shall feature 220/240 single phase controls and shall include the following as minimum:

- All compressors shall be with DOL Starting.
- Individual compressor & condenser fan motor contactors.
- Circuit Breakers for compressor & condenser fan motors.
- MCB for Control Circuit.
- Remote/Local selector switch.
- Microprocessor Control Boards.
- Control Relays.
- Power and Control Terminal Blocks.

### MICROPROCESSOR CONTROL

Chillers shall be equipped with a full function microprocessor based controller as a standard feature. The controller shall be factory programmed for the control of compressors and condenser fans. The controller shall come with a built in keypad and display for simple but meaningful man machine interface. This controller shall provide complete operational control for the chiller and shall have built-in auto diagnostic capability that can signal normal operation or alarm conditions as well as shutting down the chiller or system if necessary.

The Main Features of the controller shall be follows:

- Built in LCD display with back light.
- Built in keypad.
- Battery backed up built in real time clock.
- Multiple authorization level to provide tight security for the control system.
- Run hours for the compressors.
- Automatic Lead/Lag of the compressors.
- Capacity control based on leaving water temperature.
- Alarm history.
- Remote Start/Stop facility from an external control system.
- Common fault, run and auto mode indication through volt free contact.

### DISPLAY INFORMATION

Chiller shall be with display which allows the operator to access different parameters of the chiller. Operator shall be able to view and change the chiller parameters. The display information shall include:

- Status
- Outputs
- Inputs
- Alarms
- Set points
- Password

Controller shall monitor all the safeties related to the chiller and shall make the necessary protections, by shutting down the entire chiller or the effected circuit. The protection shall include:

- Low suction pressure.
- High discharge pressure.
- High compressor motor temperature.
- Freeze.
- Chilled water flow loss.
- Sensor faults.
- Compressor short cycling.

The controller shall support the major BMS protocols such as BACnet, Modbus & LON by adding extra hardware.
